

We're Raising A Powerful Voice Against Identity Theft

“ Identity theft is now a global issue, with customer accounts, confidential records and transaction logs vulnerable by phone and web access. With personal information being lost in record numbers, precious brand equity that takes decades to establish can be destroyed in a single moment. ”

The identity theft market is evolving and consumers are demanding more types of identity protection.

Why we're speaking up.

CSIdentity's VoiceVerified[®] is an easy-to-implement, inexpensive and simple-to-use speaker authentication solution. By analyzing a multitude of traits of your customer's voice, which make it as unique as a fingerprint, we are able to identify anyone to a high-mathematical certainty. This gives your customers three things: security, a personal connection versus an interrogation and an easier path to do business with you.

What will CSIdentity's VoiceVerified[®] do for your business?

Freedom to Conduct Business. Wherever. Whenever.

CSIdentity's Point Service Provider[®] (PSP) solution opens up unlimited possibilities for remote transactions by allowing an easy, secure and hassle-free process for doing business.

Voice Biometrics: Sound Security.

Each individual's voiceprint is as unique as their fingerprint, only better for securing a remote transaction. With CSIdentity's VoiceVerified[®], your customers require no extra hardware or software and they are not asked for any personal information. We store their voiceprints using our highly advanced voice algorithms, and when they want to do business, they are asked to repeat a random set of numbers. This voiceprint is compared to the stored sample. And in seconds your customer is on their way!

A Sound Investment.

The return on investment by deploying CSIdentity's VoiceVerified[®] is significant. Here's why:

Time Savings: CSIdentity's VoiceVerified[®] cuts an estimated 30 seconds off every customer service call.

Drastically Lowered Fraud Losses: CSIdentity's VoiceVerified[®] prevents fraud at its point of highest risk – the remote transaction.

Capital Cost Management: CSIdentity's VoiceVerified[®] eliminates expensive hardware and software purchases connected to identity management.

Increases Customer Retention: When customers are secure and feel a sense of community, customer preference, brand loyalty and longer revenue streams are created.

It's All About The Technology

CSIdentity's industry leading technology in identity verification and authentication solutions combined with CSIdentity's VoiceVerified[®] PSP creates an incredibly robust method for defeating fraud, ensuring privacy and building lasting customer relationships. This solution allows you to:

- Reliably verify an individual's identity even before enrolling their voiceprint
- Offer authentication options for high-risk transactions and customers
- Provide an additional layer of protection for individual identities
- Implement a single credentialed user within a business or institution, allowing highly secure access to various accounts all with one unforgettable credential – their voice.

CSIdentity's VoiceVerified[®]: A necessity.

Almost every business, institution or government agency that has to verify identity needs CSIdentity's VoiceVerified[®]. We offer the ideal solution for securing on-line data, call center transactions, or mobile commerce connections for employees, customers, students, and remote workers.

- **Easy Enrollment.**
Enrollment in under a minute.
- **Fast Verification.**
Verification in seconds.
- **Simple, Flexible and Strong**
The beauty of CSIdentity's VoiceVerified[®] is that the strength of its Verification can be deployed in a variety of ways that save your organization time and money: CALL-IN, CALL-OUT, through PC microphone or IVR using VoIP.
